How to Export to PDF

Aug 8, 2016 5 minutes read comments views

There are a few ways to export data to a PDF file using Django. All of them requires a third-party library so to generate the file itself. First I will show how to return a PDF response, which can also be used if you are just serving an existing PDF file. Then I will show how to use **ReportLab** and **WeasyPrint**.

Writing a PDF to Response
